**GROUP 360**

For: **SYSTEM AND METHOD FOR PROVIDING CONTINUOUS, EXPERT  
NETWORK CRITICAL CARE SERVICES FROM A REMOTE LOCATION(S)**

\* \* \* \* \*

**AFFIDAVIT BY DR. MICHAEL BERMAN**

\* \* \* \* \*

I, Dr. Michael Berman, residing at 350 E. 72 Street, New York, NY 10021, state as follows:

1. I obtained my Medical Degree in Medicine in 1967 from State University of New York and Syracuse.

2. My experience includes >20 years in Intensive Care Medicine at Yale and University of Maryland.

3. My Curriculum Vitae is attached to provide further information regarding my background and qualifications that allow me to make the statements contained herein.

4. I have read and reviewed Patent Application Serial No.: 09/443,072 and the following U.S. Patents (collectively, the "Patent References"):

- U.S. Pat. 6,364,834 issued to Reuss, et al. entitled Method and System for Remotely Monitoring Multiple Medical Parameters in an Integrated Medical Monitoring System," (herein, the "Reuss Patent").
- U.S. Pat. 4,838,275 issued to Lee entitled, "Home Medical Surveillance System," (herein, the "Lee Patent").
- U.S. Pat. 3,646,606 issued to Buxton et al. entitled, "Physiological Monitoring System," (herein, the "Buxton Patent").

5. The Reuss Patent describes an integrated medical monitoring system having a patient monitor, a central monitor, and a remote access device. Each of these devices is tied

together through an integrated communications link. The communications between various components of the system are bi-directional, an attribute described as affording the opportunity to establish monitoring parameters from remote locations, provide interactive alarms and monitoring capabilities, and provide data exchange between components of the system. The thrust of the Reuss Patent is the collection of data from monitors so that the data are *available* to a caregiver. The caregiver may view the data on a display or request the data for viewing.

The claimed inventions, as noted in the claims of the Rosenfeld/Breslow patent application, provide for 24-hour dedicated monitoring/management system and method that monitors and processes clinical data in a fashion germane to an intensivist-led care team, made up of intensive care specialists, critical care nurses and clerical support personnel, to care for patients in multiple ICU's in disparate geographic locations, either within a building or in different buildings, simultaneously and continuously. The claimed inventions facilitate the provision of patient care by a care team from a dedicated monitoring facility comprising equipment and decision support algorithms developed explicitly for this purpose. The claimed invention provides for automated warnings relating to threshold vital signs and trends in vital signs and other physiologic and laboratory data, provides assessment of those thresholds and trends for the intensivist, and makes recommendations for intervention available for consideration by the intensivist. The thresholds and trends are pre-set based upon admitting and daily diagnoses and are customizable based upon the particular patient and condition. The claimed inventions thereby relieve the care team of having to sort and deal with large volumes of unprocessed clinical and patient data.

In contrast to the present invention, the Reuss Patent describes detecting when data has been read, and characterizes this function as "particularly useful in time-sensitive medical emergency situations." (See, Col. 6, line 5-9). The claimed invention treats all data as time-sensitive. While the Reuss Patent describes automation of data acquisition, the analysis of the transmitted data is performed post hoc and by a caregiver. Additionally, the Reuss Patent contemplates that intervention may not, in fact occur. One of the described capabilities of the Reuss invention is the ability to "determine the location of a plurality of caregivers and select an appropriate primary recipient of the alarm message based on location." Reuss Patent, col. 5, lines 47-49. This suggests that while patient data is acquired, it may not be acted upon. This reading is bolstered by references to the bi-directional capabilities of the communications link,

“which can determine that a caregiver has read and responded to a message.” Reuss Patent, col. 5, lines 3-5.

It is clear that the Reuss Patent is directed to information gathering, distribution and ad hoc evaluation, not to the automated proactive monitoring and intervention of the claimed inventions. Rather, the Reuss Patent teaches observation of patients by a caregiver and evaluation of data directly by a caregiver, rather than easing that burden through knowledge based means.

6. The Lee Patent describes an apparatus for use in a patient's home that includes special furniture on which the patient lies and sits. Embedded in this special furniture are devices that automatically sense multiple parameters related to the patient's health. The patient cooperates only passively. The parameters are so chosen to provide a profile of the patient's general state of health. The apparatus also generates electronic health-parameter signals related to the sensed parameters, and it transmits these signals from the patient's home to a central surveillance and control office. Equipment there receives the signals, displays corresponding indicia of the parameters, and transmits control signals back to the patient's apparatus. Two-way voice communication between the patient and a highly trained observer at the central office supplements the electronic measurements. The observer conducts routine diagnostic sessions except when an emergency is noted from these sessions or from a patient-initiated communication. The observer determines whether a non-routine therapeutic response is required, and if so facilitates such a response such as a transfer to a hospital for more direct care. Selection among emergency cases follows a highly refined emergency-priority hierarchy.

The Lee Patent is directed to monitoring **ambulatory patients** in a home environment. However, this monitoring is not stated to be continuous. Rather, the control office is described as having means for selecting a particular one of the patients for display of that particular patient's indicia by a displaying means. These selecting means are manually operable by a trained observer in the office. In this system the trained observer is enabled to determine the general state of health of substantially each one of the many patients--and also to determine from this information whether a non-routine therapeutic response should be provided for substantially each patient. An emergency-priority hierarchy guides the observer in a systematic way when the observer must select, from among two or more patients requiring emergency attention, which patient to deal with first, which next, and so on.

This hierarchical approach to “monitoring” is distinct from the 24-hour, continuous care provided by the claimed inventions. The system of Lee is only intended to monitor a single patient at a time, as is typically done by physicians with outpatients. It is inconceivable that a single observer, whether a doctor or a trained intensivist, can provide quality care to plurality of acutely ill patients, such as those found in an ICU, if that same observer is charged with monitoring data streams and evaluating the data for patterns indicative of clinical changes in the condition of each of the plurality of patients.

The teachings of Applicant’s disclosure challenge this old regime by providing automated tools that continuously receive the data collected from an acutely ill patient, correlate disparate physiological indicators, and apply algorithms to determine if the present and projected condition of the patient warrants proactive intervention.

7. The Buxton Patent describes an apparatus for measuring physiological parameters indicative of the condition of a patient and sending those parameters to a central monitoring station. The central monitoring station would display the parameters in analog and digital form issue an alarm signal in the event certain parameter values are detected. Viewing patient data is accomplished by selecting a patient using a switch (Figure 3, callout 122). Thus, not all patients are monitored at all times. The Buxton Patent is clearly directed to a data gathering system combined with a single event driven process to manage “emergencies.” Data is presented to a single operator and, except for certain alarm conditions, the evaluation of that data is charged to the single operator. Applicant further submits that it is not possible for a single operator to make simultaneous, continuous, proactive evaluations of multiple patients in real-time using the system and methods taught by Buxton. Indeed, the Buxton Patent merely subscribes to the ordinary monitoring paradigm employed presently in the majority of hospitals.

By contrast, the claimed inventions are directed to systems and methods for providing care to each patient in an ICU simultaneously on a 24-hour basis.

8. Even assuming that one skilled in the art were motivated to combine the references as suggested by the examiner, regardless of the how the references are combined, the combination will not successfully produce the results of the claimed inventions. Application of the present invention gave unexpected results with respect to patient mortality rate, length of stay, average case cost, average case contribution to margin, and monthly contribution to margin as well as extending the typical 1:12 ratio of intensivists to patients to a ratio of 1:33 in one

published study and as high as 1:83 in current practice.

- (a) Application of the present invention to the monitoring of a plurality of hospital ICUs resulted in a 27.1% decrease in mortality (from 12.9% to 9.4%) relative to a baseline that *included intensivists*. Although it is known that the participation of an intensivist can decrease the ICU mortality rate, it was unexpected to one of ordinary skill in the art that the addition of the remote monitoring and proactive processing of clinical data of the present invention to such ICUs would result in a further 27% decrease in mortality.
- (b) Application of the present invention also decreased the average length of stay (LOS) in the study ICUs by 16.6% (from 4.35 days to 3.63 days). This decrease in LOS is significant given the increasing need for ICU beds and the solution presented by the present invention is non-obvious since many ICUs operate at full capacity, thereby requiring many acutely ill patients to be treated elsewhere in the hospital. Hospitals would surely have implemented such an improvement in throughput/capacity *if it had been obvious*.
- (c) Application of the present invention also resulted in a significant decrease in the average case cost an ICU stay by 24.6%, a significant (55.7%) increase in the average case contribution margin, and a significant (65.9%) increase in the contribution margin per month. All of these saving and cost related factors are important since they enhance the ability of hospitals to provide ICU care and extend a resource that is predicted to be stretched thin. Further, any such significant cost-saving measure would have surely been implemented by hospitals *if it had been obvious*.

9. As stated above, it has been recognized that the participation of an intensivist can greatly improve ICU care. The currently recommended ratio of intensivists-to-patients is between 1:12 (multi-patient type unit) and 1:15 (single-patient type unit). Despite the knowledge that ICU care can be improved with intensivists, the current intensivist-to-patient ratio has prevented wide adoption of the recommendation due to a lack of trained personnel. Application of the present invention has addressed long-felt but unresolved needs. That is, application of the present invention decreased mortality, LOS, and costs *while at the same time extending the intensivist-to-patient ratio by greater than 500% to 1:33- 1:83*, thereby greatly assisting in the unresolved need for more intensivists by potentially more than tripling patient access to

intensivist-supervised care.

10. I believe that remote, 24-hour monitoring of ICU patients in multiple geographically disparate locations in a manner germane to an intensivist-led care team is not taught by any of the aforementioned Patent References nor would one of skill in the art make the required changes to the equipment and procedures disclosed in the Patent References to arrive at the present invention for at least the following reasons:

- The Patent References share the belief that if only physiological data can be delivered to the right person, the health of patients would be improved. Thus, each addresses means for gathering physiological data and distributing that data to a location or locations. This is a data-gathering paradigm that makes data available to experts. While the inventions may offer solutions to the problems set forth above, the references teach little more than extending the basic bedside monitoring and data collection to remote locations.
- Determining that an emergency has occurred based on the preset threshold of a single physiological parameter and issuing an alarm is an event-driven process, and is the current bedside model, not a “proactive” one. Knowing that a patient has entered an emergency state is not the same as “knowing” that a patient is entering an emergency state at some point in the future if some proactive intervention is not initiated. Further, using trending data that is acquired and saved over hours of monitoring time does not qualify as proactive. The proactive aspects of the claimed inventions envision real-time, continuous *analysis* of data on a 24-hour, 7-day per week basis.
- The invention described and claimed in Application Serial No.: 09/443,072 does not rely on the paradigm of primary monitoring by bedside personnel, with secondary calls to intensivist, but rather provides parallel processing of data in a continuous, 24-hour care of each ICU patient. The claimed inventions facilitate proactive care of these patients by providing means by which a care team may unilaterally enter a patient’s room for video and audio communication. Indeed, the high fidelity video facilitates the real time intervention supported by the claimed invention by allowing the intensivist to make a better determination of the patient's status. Using decision support algorithms, the systems and methods of the claimed inventions automatically issue alerts when a patients’ vital signs or laboratory values indicate a detrimental

trend and facilitate interventions with the patient when necessary. The Patent References neither teach 24-hour monitoring and proactive processing and analysis of the monitored clinical data by an intensivist-led care team nor the use of decision support algorithms to alert the intensivist of a detrimental trend in a patient's vital signs.

- Even assuming that one skilled in the art were motivated to combine the references as suggested by the examiner, regardless of the how the references are combined, the combination will not successfully produce the results of the claimed inventions. This statement is supported, if not proven, by the dramatic and unexpected results derived from practicing the teachings of Applicants disclosure as describe above.

Member, Advisory Committee, Child Welfare Center, University of Maryland School of Social Work and Community Planning; 1986 - 1991.

Member of Chancellor's Public Image Task Force for UMAB; June, 1988 - 1990.

Member, President's Task Force on UMAB/UMMS Relations - Schools/Campus/Hospital. 1989

Member Medical Center Management Group.  
Group formed to deal with major policy and directional decisions for the Medical Center. 1989 - 1997.

Chairman, Year of the Child Committee for the UMAB Campus. 1989 - 1990.

Member, University of Maryland Cancer Center Task Force Strategic Planning Committee. 1990 - 1992.

Member, University of Maryland at Baltimore Parking and Commuter Services Council. 1993.

Member, University of Maryland Life Sciences Achievement Awards Committee for the University Center. April, 1993 - 1996.

**UNIVERSITY OF MARYLAND**  
**MEDICAL SCHOOL**

Member, University of Maryland Dean's Committee for Community Affiliations; 1979.

Member, University of Maryland Medical School Admission, Committee; Interviewer 1979-1982.

Member, Committee for Curriculum Coordination, Assessment of Sophomore Correlative Medicine; 1980.

Member, Creation of a Cardiovascular Curriculum Committee; 1980.

University of Maryland School of Medicine; 1980.

Member, Search Committee for the Chairman of Medicine, University of Maryland School of Medicine; 1980.

Member, Board of Directors, Medical Board of the University of Maryland School of Medicine; 1982 - 1997.

Member (one of three - the medical school representative) Graduate Medical Education Policy Committee; 1985 - 1996.

Member, Education Research in Cardiovascular Disease; University of Maryland School of Medicine. September, 1982 - 1994.

Board of Directors, University of Maryland School of Medicine Hypertension Center; 1984 - 1997.

Chairman, Search Committee for Chairman of Anesthesiology of the School of Medicine; 1988.

Member, Search Committee for Dean, University of Maryland School of Medicine; 1989 - 1991.

Member, Search Committee for Chairman of Family Medicine, University of Maryland School of Medicine; 1990.

Chairman, Advisory Committee to the Dean's Office regarding fund raising; 1990 - 1992.

Chairman, Appointment, Promotion and Tenure Review Committee; July 1991 to June 1993.

Chairman, Resources Subcommittee, Institutional Self-Study Task Force, LCME Accreditation; August, 1991 - January, 1993.

Member, Institutional Self-Study Task Force Committee; August, 1991 - January, 1993.

Member, Strategic Planning Committee; April, 1992 - 1993.

**MICHAEL A. BERMAN, M.D.**  
**Curriculum Vitae**  
**Page 13**

Chairman, Clinical Practice Taskforce, Strategic Planning Committee; June, 1992 - 1993.

Member, Search Committee for Chair of the Department of Radiology; June, 1992.

Member, Community Outreach Committee of the Strategic Planning Committee; June, 1992 - 1993.

Chair, Affiliation Committee University of Maryland School of Medicine/Mercy Medical Center, Inc. April, 1993 - 1995.

Member, Faculty Workload Survey Committee; November, 1993 - 1994.

Member, Appointments, Promotion & Tenure Policies & Procedures Revision Committee; January, 1994 - 1995.

Member, Committee to Review Guidelines for Medical School Graduation Awards. April, 1994 - 1995.

**UNIVERSITY PHYSICIANS, INC.**  
**(Faculty Practice Corporation)**

President, University of Maryland Medical Associates, P.A.; 1981-1983

Member, Board of Directors, University of Maryland Medical Associates, P.A.; 1981 - 1997.

Representative of University Physicians, Inc., to the Trust Management Committee - examined insurance vehicles for malpractice and liability. Formed Self-insurance Trust for hospital and physicians (University of Maryland Medical Services System) 1984 - 1997.

Member, Task Force on Alternative Delivery Systems, Hospital, University Physicians, Inc., Medical School: March, 1986-1987. Evolved into Maryland Medicine, the Campus corporation for managed health care and other entrepreneurial ventures; 1987 - 1993.

Founder and member of University of Maryland Medical Center Marketing Committee. 1988.

Member, Maryland Medicine-University Physicians, Inc., Representative; 1987 -1993.

Member, UPI Executive Committee; 1986 – 1997.

Member, University Physicians, Inc., Board of Trustees Committee, Long Range Planning; December, 1986-1989.

Chairman, Fringe Benefit Committee, University Physicians, Inc.; 1987-1990.

Member, Board of Directors (one of five, includes President of the Campus; Dean, School of Medicine; CEO of hospital; Chairman of the Board of the Hospital), University Health Network. Initially the PHO for the Medical Center, responsible for developing primary care network (inner city and central old); acquisition of practices, etc. Now has become the University of Maryland Clinical Enterprise. 1991 – 1997.

Davidge Group. Directed the establishment of University Physicians, Inc., Medical Service Organization (MSO) for external and internal clients. 1994 – 1997.

President, University Physicians, Inc.; July 1, 1989 -June 30, 1996. (Elected one-year terms).

Member, UPI Clinical Practices Committee (CPC). Formed 1995 to streamline and make all decisions for faculty practice with exception of new taxes. Comprised of Dean, myself and one selected physician; 1995 - 1997.

**UNIVERSITY OF MARYLAND  
MEDICAL SYSTEM (Hospital)**

Member, Vice-Chancellor's Medical System Task Force for Ambulatory Health Care; University of Maryland Medical Systems; 1982.

President Elect, Medical Staff of the University of Maryland Hospital; June, 1982 - May, 1983.

President, Medical Staff of the University of Maryland Hospital; May, 1983-1984

Member, Capital Equipment Committee University of Maryland Medical System. 1983-1990.

Member, Joint Conference Committee of the Medical Executive Committee, UMMS (Comprised of Hospital Board members & physicians): 1985 - 1991

Member, Strategic Planning Committee of the University of Maryland Medical System Board of Trustees; 1986-1997.

Member, Development Committee of the University of Maryland Medical System Board of Trustees; 1986-1994.

Member, Marketing Oversight Committee, University of Maryland Medical Center; 1989 – 1997.

Member, Medical Center Master Facilities Project Steering Committee; 1989 – 1997.

Member, Primary Care Task Force, University of Maryland Medical System; April, 1990 - 1994.

Chairman, Critical Care Transport Taskforce; 1990 - 1993.

Member, The Strategic Planning Steering Committee Cancer Care Task Force; 1990 - 1997

Member, Graduate Medical Education Policy Committee; 1990 - 1996. (One of three members that deals with all issues for housestaff, i.e., salary, corporate structure, benefits; supervisory issues, etc.).

Member, Clinical Chiefs Budget Advisory Committee; February, 1991; 1992; 1993; 1994.

Member, Nominating Committee, Medical Staff Offices; FY 1991-92.

Member, Medical Center Planning Group; 1991 - 1997.

Member, Strategic Planning Executive Committee Phase III subcommittee of the Clinical Program & Support Services

Assessment Committee and the Financial Sources Assessment Committee; November, 1992 - 1997.

CoChair, UMMC Medicaid/Medicare Taskforce; November, 1995 - 1997.

Member, Medical School representative hospital and/or physician Merger & Acquisitions Committee; December, 1995 - 1997.

Member, Board of Directors, Physician Hospital Organization (PHO); May, 1995-1997.

Member, UMMC Information Technology Oversight Committee; January, 1996 - 1997.

Leader, Continuum of Care Group. UMMC Leadership Retreat of the Phase III Downtown Redevelopment Project. February, 1996.

Member, Advisory Committee, Neurosurgery Program Planning Committee. April, 1996 – 1997.

#### **MARYLAND MEDICAL CENTER INSURANCE PROGRAM**

Member, Executive Committee, University of Maryland Medical Services Self-Insurance Trust. 1984 – 1997.

Head of Claims Committee, University of Maryland Medical Services Self-Insurance Trust. 1984 – 1997.

Head of excess liability placement, University of Maryland Self-Insurance Trust. 1987 – 1997.

Chairman, University of Maryland Medical Services System Self-Insurance Trust; September, 1987 – 1997.

Chairman, Terrapin Insurance Company; captive insurance company formed, November, 1990.

**MICHAEL A. BERMAN, M.D.**  
**Curriculum Vitae**  
**Page 17**

**COLUMBIA UNIVERSITY**  
**NEW YORK, NEW YORK**  
**(Health Sciences division)**

02/23/98 – Present	Voting member Faculty Council of the Faculty of Medicine.
06/01/98 – 06/30/99	Lecturer. in Pediatrics. Columbia University of the City of New York.
7/1/99 – Present	Professor of Clinical Pediatrics.
09/98	Dean's Administrative Affairs Committee
09/22/98 - Present	Standing Committee on the Health Sciences of the Columbia University Trustees.

**JOAN AND SANFORD WEILL**  
**MEDICAL COLLEGE & GRADUATE SCHOOL OF**  
**MEDICAL SCIENCES CORNELL UNIVERSITY**  
New York, New York

11/98 -	Board of Directors, Griffis Faculty Club.
10/99 – Present	Professor of Clinical Pediatrics.

**DEVELOPMENTS**

Berman Angiographic Catheter. Flow-guided balloon angiographic catheter used extensively in pediatrics and radiology.

Flow-guided hydrogen catheter for shunt detection.

**ACADEMIC REVIEWS**

Member, Committee on Medical Self-Knowledge Assessment Program; American College of Physicians, National Board of Medical Examiners. 1979-1980.

Consultant to the Dean, University of Texas at San Antonio; a review and assessment of the Department of Pediatrics. 1981.

Ad hoc Member, Epidemiological Study Section; National Institutes of Health; Bethesda, Maryland; 1981.

National Heart, Lung and Blood Institute Special Review Committee on Pediatric AIDS (Cardio-Pulmonary Effects); December, 1988.

16. **Berman MA:** A flow-guided angiographic catheter. Exhibit, American Heart Association, Dallas, Texas, 1975.
17. **Berman MA, Stansel HC, Jr., Nudel DB, and Talner NS:** Prosthetic valve replacement in children. Presented at the International Cardiovascular Society, Boston, Massachusetts, 1975.
18. **Barash PG, Berman MA, Lesovich RN, Talner NS, Katz J and Stansel, HC, Jr.:** Early extubation following pediatric cardiac surgery: an analysis of 198 consecutive admissions. Crit Care Med 4:109, 1976. Presented at the 5th Scientific Meeting of the Society for Critical Care Medicine, May 1976.
19. **Glanz, S, Berman MA, Glanz S, Hellenbrand WE, and Talner NS:** Echocardiographic determination of ventricular dimensions: use in aortic stenosis. Ped Res 10:312, 1976. Presented at the annual meeting of the Society for Pediatric Research, April, 1976.
20. **Berman MA, Baker K and Gillis CN:** Metabolism of prostaglandin A<sub>1</sub> and E<sub>1</sub> (PGA<sub>1</sub> and PGE<sub>1</sub>) by the perfused rabbit lung: demonstration of age dependence. Ped Res 10:328, 1976. Presented at the Society for Pediatric Research, April, 1976.
21. **Berman MA, Baker K and Gillis CN:** Fate of biogenic amines in rabbit lung: demonstration of age dependence. Ped Res 10:457, 1976. Presented at the Society for Pediatric Research, April, 1976.
22. **Stansel HC, Jr., Tabry IF, Poirier RA and Berman MA:** One hundred consecutive coarctation resections followed from one to thirteen years. Presented at the Surgical Section of the American Academy of Pediatrics, October, 1976.
23. **Berman MA, Barash PG, Hellenbrand WE, Stansel C, Jr. and Talner NS:** Late development of severe pulmonary obstruction (PVO) following the Mustard operation. Presented at the 49th Scientific Sessions of the American Heart Association, November, 1976.
24. **Brenner JI, Baker KR, Turney SZ and Berman MA:** Prediction of left ventricular pressure in infants less than one year of age with aortic stenosis. Presented at the Southern Society for Pediatric Research, January, 1978.
25. **Berman MA:** Technique for manipulation of balloon catheters. Scientific exhibit presented at the American College of Cardiology meetings, March, 1978.
26. **Berman MA:** Nuclear medicine and ultrasound applications in pediatric cardiology. Presented at the 8th Annual Meeting of the Society for Nuclear Medicine, April, 1978.

27. Brenner JI, Roberts GS and **Berman MA**: Holter monitoring in children. Scientific exhibit presented at the Annual Medical-Chirurgical Faculty of the State of Maryland, May 1979.
28. **Berman MA**, Roberts GS and Brenner JI: Advances in diagnosis and management: pediatric cardiology, Presented at the Maryland Medical and Chirurgical Faculty meeting, May, 1979.
29. Brenner JI, Moschler T and **Berman MA**: Assessment of left ventricular performance in infants and children with quantitative radionuclide angiography: studies in patients with cardiomyopathies. Presented at the Southeastern Pediatric Cardiology Society, September, 1979.
30. **Berman MA**: Approach to diagnosis and management of infants with critical obstruction to pulmonary blood flow. Presented at the 182 Annual Meeting of the Medical and Chirurgical Faculty of the State of Maryland, Baltimore, Maryland, April 23-25, 1980.
31. Moulton AI, Roberts GS, Brenner JI, **Berman MA** and Ringel RE: Coarctation of the aorta. Presented at the 183rd Annual Meeting of the Medical and Chirurgical Society of the State of Maryland, Baltimore, Maryland, May, 1981.
32. Brenner JI, Burns JE, Ringel RE, Moulton AI and **Berman MA**: Pulmonary artery banding: surgical experience and echo evaluation. Presented at the Southeastern Pediatric Cardiology Society, Williamsburg, Virginia, September, 1981.
33. **Berman MA**, Ringel RE, Brenner JI, Roberts GS and Moulton AI: Post-operative rhythm assessment a prospective study. Presented at the Southeastern Pediatric Cardiology Society, Williamsburg, Virginia, September, 1981.
34. Ringel RE, Brenner JI, **Berman MA**, Roberts GS and Moulton AI: Predictive value of 24 hr. preoperative rhythm assessment in cardiac surgical patients. Presented at the American Academy of Pediatrics Fall Session, New Orleans, LA: November, 1981.
35. Ferencz C, **Berman MA**, Brenner JI, Ringel LRE, Blaustein M, and Dischinger P: Hypertension: Clinical and Experimental Screening. Presented at the 184th Annual Meeting of the Medical and Chirurgical Faculty of the State of Maryland, Baltimore, Maryland: April 28-30, 1982.
36. Brenner JI, **Berman MA**, and Ferencz C: Role of continuous BP monitoring in detecting adolescent hypertension. Presented at the mid-Atlantic Pediatric Cardiology Society, Annapolis, Maryland, June, 1982.
37. Moulton AL, Brenner JI, Green D, Burns JE, Ringel RE, **Berman MA**, McLaughlin JS: Pulmonary artery banding in infancy for complex intracardiac defects. Presented at the

**Curriculum Vitae**  
**Page 28**

American College of Cardiology, 31st Annual Scientific Session, Atlanta, Georgia, April, 1982 and also at the USSR Cardiothoracic Symposium; August, 1982.

38. Brenner JI, Dischinger P, Bross D, Ringel RE, **Berman MA**, and Ferencz C: Ambulatory BP monitoring in adolescents: techniques and initial experience in 50 subjects. Presented at Southeastern Pediatric Cardiology Society, Sea Island, Georgia: September, 1982.
39. Brenner JI, Ringel RE, Burns JE, Roberts GS, Moulton AL and **Berman MA**: Incidence and long-term effect of PGE<sub>1</sub> induced periostitis. Presented at Southeastern Pediatric Cardiology Society, Sea Island, Georgia: September, 1982.
40. **Berman MA** and Brenner, JI: Manipulation of balloon catheters. Presented at Southeastern Pediatric Cardiology Society, Sea Island, Georgia: September, 1982.
41. Brenner JI, Dischinger P, Bross D, Ringel RE, **Berman MA**, and Ferencz C: Twenty-four ambulatory monitoring: results of 77 studies. Presented at the annual Academy of Pediatrics, Fall Session, New York: October, 1982.
42. Ringel RE, Hamlyn J, Schaeffer J, Hamilton B, Kowarski A, Blaustein M and **Berman MA**: Red blood cell sodium-potassium cotransport and sodium concentrations transport in black males. Presented at the Society for Pediatric Research, Washington, DC, May, 1983.
43. Ali S, Moulton AL, Tavares S, Lincoln S, Burns JE, Brenner JI and **Berman MA**: Subclavian flap repair of coarctation of the aorta in neonates and infants. Submitted for presentation at the Joint Annual Meeting, International Society for Cardiovascular Surgery/Society for Vascular Surgery: June 15-18, 1983; San Francisco, California.
44. Moulton AL, Brenner JI, Burns JE and **Berman MA**: Management of mitral stenosis and hypoplastic left ventricle following successful palliation as a neonate. Presented at the Society of Thoracic Surgery, San Francisco, California, January 1983.
45. Ringel RE, Brenner JI, Moulton AL and **Berman MA**: Subclavian flap repair for coarctation of the aorta in infancy. Presented at the Mid-Atlantic Pediatric Cardiology Association: Baltimore, Maryland, 1983.
46. Brenner JI, Ringel RE, **Berman MA**: Long term prostaglandin E<sub>1</sub> therapy in congenital heart defects (letter to ed.), 1984, Journal American College of Cardiology.
47. Brenner JI, Dischinger P, Ferencz C, Wilson PD, **Berman MA**: Analysis of 24 ambulatory BP in adolescents: effect of age and family history. Presented at mid-Atlantic Pediatric Cardiology Society, Charlottesville, Virginia, June, 1984.
48. Moulton AL, Brenner JI, Ringel RE, Ali SM, and **Berman MA**: "CLASSICAL" versus "MODIFIED" Blalock-Taussing Shunts in Neonates. Circ 70:11:248, 1984.

49. Brenner JI, Ringel RE, Ferencz C, Dischinger P, **Berman MA**: Ambulatory BP in Adolescents. Presented at the 186th annual meeting of the Medical and Chirurgical Society of the State of Maryland, Baltimore, MD; April, 1984.
50. McKenzie C, Terhaar M, **Berman MA**: Family Focused Care Reform: Ask the Children and Families what they need. Presented at the Third International Family Nursing Conference, Montreal, Quebec; May 1994.
51. Terhaar M, Campbell K, Chmielewski P, **Berman MA**: A Collaborative Practice Model to Support Outcomes in the NICU. Presented at the Annual Conference, Association for the Care of Children in Hospitals, Toronto, Ontario; May, 1994.
52. Terhaar M, Campbell K, **Berman MA**: A Collaborative Practice Model for Care of the Neonate with Surgical Diagnoses presented at the Annual Conference, Association for the Care of Children in Hospitals, Toronto, Ontario; May 1994.
53. Terhaar M, McKenzie C, Chmielewski P, **Berman MA**: Data Driven Decision Making to Support Outcomes Management in Pediatric Populations. Presented at the Annual Conference, Association for the Care of Children in Hospitals, Toronto, Ontario; May 1994.

#### International

1. Brenner JI, Baker KR, Moulton AL, Green DC and **Berman MA**: Real-time echocardiographic evaluation of the atrial septum in children with right ventricular volume overload. Presented at the World Congress of Pediatric Cardiology, London, England, June, 1980.
2. **Berman MA**, Brenner JI, Roberts, GS, Moulton AL and Kennedy H: Application 24-hour ambulatory ECG monitoring in the pediatric age group. Presented at the World Congress of Pediatric Cardiology, London, England, June, 1980.
3. **Berman MA**, and Brenner JI: Manipulation of balloon catheters. Presented as a scientific exhibit at the World Congress of Pediatric Cardiology, London, England, June, 1980.
4. Brenner JI, Moschler T, Moulton AL and **Berman MA**: Evaluation of left ventricular performance in infants and children using radionuclide angiography. Scientific exhibit presented at the World Congress of Pediatric Cardiology, London, England, June, 1980.

5. Meijboom EJ, Ebels TJ, Wyse RKH, Deanfield JE, Anderson RH, Brenner JI, **Berman MA**: Post-operative left atrio-ventricular valve regurgitation in atrio-ventricular septal defect. Association of European Pediatric Cardiologist, XXIII Annual General Meeting, Hamburg, FRG, April 28-May 1, 1987.

**Invited National and International (Named Lectures and Symposium)**

1. **Berman MA**: Recent developments in cardiac catheterization. Presented at the Helen B. Taussig International Symposium on Pediatric Cardiology, May, 1976.
2. **Berman MA**: Transposition of the great arteries. Presented at the Long Island Jewish Hospital Symposium on Pediatric Cardiology, November, 1977.
3. **Berman MA**: Cardiac catheterization. Presented at the Long Island Jewish Hospital Symposium on Pediatric Cardiology, November, 1977.
4. **Berman MA**: Hemodynamic results following operation. Presented at Pediatric Cardiology, Baltimore, Maryland: January, 1978. (Program coordinator).
5. **Berman MA**: (1) Transposition of the great arteries; (2) Cardiac catheterization: Current Status; (3) Tetralogy of Fallot and (4) Coarctation of the Aorta. Presented at the Astra Pharmaceutical Symposium of Surgically Remedial Heart Disease, Manila, Philippines, 1980.
6. **Berman MA**: Current status of cardiac catheterization in infants and children. Presented at the 5th Annual Family Medicine Review Course, Baltimore, Maryland, September, 1979.
7. Moulton AL (Coordinator), **Berman MA** (co-coordinator), McLaughlin JS, Green DC and Brenner JI: Current Controversies and Techniques in Congenital Heart Surgery. Sponsored by the University of Maryland School of Medicine, Department of Continuing Education and the Division of Cardiothoracic Surgery and Pediatric Cardiology; May 7-8, 1981, Baltimore, Maryland.
8. **Berman MA** (Program Director), Brenner JI, Weinstein SL, Hohn A and Elliott LS: Pediatric Cardiology Workshop; Viernheim, Germany. US Army 7th Medical Command; January, 1982.
9. **Berman MA**: Patent ductus arteriosus in the newborn. Presented at the George S. Husson Memorial Lecture, Syracuse, New York; April, 1982.

10. **Berman MA:** The Berman Angiographic Catheter. Presented at the 16th Annual Conference of the National Society for Cardiopulmonary Technology, Inc. Washington, DC, May, 1983.
11. **Berman MA:** How to Evaluate Chest Pain in Children and Adolescents. Presented (panel member) American College of Cardiology, Anaheim, California, March, 1985.
12. **Berman MA:** Presented (1) Cardiomyopathy; (2) Axial Cineangiography in Congenital Heart Disease; (3) Sudden Infant Death Syndrome (SIDS). People to People Pediatric Cardiology Delegation of the People's Republic of China, September, 1985.
13. **Berman MA:** Surgical Alternatives of the Newborn with Congenital Left-sided Cardiac Obstruction. Third Annual Perinatal Symposium and Inaugural Meeting of the Maryland Perinatal Association, Baltimore, Maryland. June 1986.
14. **Berman MA:** Financing the Operation of a Pediatric Department. Presented at "The Pediatrician of the '90's" session sponsored by Wyeth Laboratories, October, 1986, Cancun, Mexico for pediatric department chairman.
15. Participating member CME Conference: Fetal Echocardiography, Baltimore, MD, November 3, 1986.
16. Chairman, Fetal Cardiology Course sponsored by University of Maryland, pediatric cardiology, in conjunction with the American Heart Scientific Sessions, Anaheim, California, November 14-15, 1987.
17. Co-Chairman, Fetal Cardiology Course, Division of Pediatric Cardiology, Department of Pediatrics, University of Maryland, in conjunction with the American Heart 61st scientific session in Washington, D.C. November 12-13, 1988.
18. Chairman, (one of two), Session I, Fetal Cardiology Symposium. Bangkok, Thailand, November 24, 1989. Sponsored by the Division of Pediatric Cardiology, University of Maryland School of Medicine.
19. **Berman, MA:** "Pediatric Cardiology - Changes in Therapy and Outcome" Presented at the American Academy of Pediatrics District III meeting, Baltimore, Maryland, March, 1990.
20. Group Discussion Leader, Association of American Medical Colleges Minority Faculty Career Development Seminar, Washington, DC, October 21, 1991.
21. Association of American Medical Colleges Annual Meeting. Panelist, Group on Faculty Practice Business Affairs, Database Committee. "Preserving the Viability of the Academic Medical Center - Chairman/Faculty Practice Plan View", Washington DC, November 12, 1991.

22. State of Maryland Infants & Toddlers Program moderator. Symposium on the Prevention of Developmental Disabilities in Infants and Toddlers. Johns Hopkins University, Baltimore, Maryland. June 4-5, 1992; Moderator, April 18, 1993.
23. Participant. American Academy of Pediatrics planning meeting for the 1993 Annual Meeting, Washington, DC, November 8, 1992.
24. Matjasko, J; **Berman, MA**: Faculty Moderator. Association of American Medical Colleges Senior Women in Professional Development seminar, Washington, DC. 1993, 1994, 1995, 1996, 1997.
25. **Berman, MA**: "It Ain't the Money, It's the Money!". Presented at the 1993 New Chairmen's Meeting, Association of Medical School Pediatric Department Chairmen, Inc., The Buttes, Tempe Arizona, March 4, 1993.
26. **Berman, MA**: "Child Health Care in the 1990's". Presented at the Maryland Chapter, American Heart Association, Baltimore, MD. May 12, 1993.
27. **Berman, MA**: Health Care Reform presentation and panel discussion. Wheaton College, Norton, Massachusetts. October, 1993.
28. Group Discussion Leader, Association of American Medical Colleges Minority Faculty Career Development Seminar, Washington, DC, October 2-5, 1993, 1994, 1995.
29. Matjasko J, **Berman, MA**: "Faculty Practice Plan". Presented at the American Association of Medical Colleges Senior Women in Professional Development Seminar, March, 1994, Washington, DC.
30. **Berman, MA**: "Corporatization of Medicine: Concerns for Children's Care". Invited speaker at the G. Bowers Mansdorfer Annual Lecture, Mercy Medical Center, Baltimore, Md., May, 1994. Speakers are selected who reflect Dr. Mansdorfer's qualities of a learned, caring, and committed pediatrician.
31. Terhaar MF, **Berman MA**: "Data Driven Decision Making to Support Outcomes Management in Pediatric Populations". Annual Conference, Association for the Care of Children in Hospitals, Toronto, Ontario. 1994.
32. Matjasko, J; **Berman, MA**: "Corporatization of Healthcare". Presented at the Association of American Medical Colleges Senior Women in Professional Development. March, 1995, Washington, DC.
33. Terhaar MF, **Berman MA**: "Outcomes Management in Children's Health". Presented at the NACHRI Quality Conference, Orlando, FL. 1995

46. **Berman M:** Keynote speaker for Howard University Hospital retreat "Integrated Health Care Systems: Academic Health Centers and Faculty Practice Plans". Washington, DC, March 21-22, 1997.
47. **Berman M., D'Antuono R:** "Assessing Faculty Productivity and the Roles of the Department Chair and Administrator". The 15<sup>th</sup> Annual Conference of the Association of Administrators in Academic Pediatrics. Banff Springs, Alberta, Canada, May 18, 1998.
48. **Berman M:** "Preparing for a Hospital Merger from a Pediatric Perspective" 15<sup>th</sup> Annual Conference of the Association of Administrators in Academic Pediatrics. Banff Springs, Alberta, Canada, May 18, 1998.
49. **Berman M:** Speaker for Association of American Medical Colleges "Challenges to Traditional Departmental Structures. Vancouver, British Columbia, Canada, April 22-24, 1999.
50. **Berman M:** Speaker for Partners Healthcare System "9/11/01 Tragedy and NewYork Presbyterian Hospital and System Preparedness for Terrorism". Boston, Massachusetts, February 12, 2002.
51. **Berman M:** Speaker for National Managed Healthcare Congress "Upgrade Hospital Readiness Plans to Respond Effectively to Disaster and Bioterrorism". Baltimore, Maryland, April 15, 2002.

April, 2003

**MICHAEL A. BERMAN, M.D.** is the Executive Vice President of New York Presbyterian and the Director of the New York Presbyterian Hospital. He was appointed the Senior Vice President and Chief Medical Officer for the New York Presbyterian Hospital in October, 1997 and promoted to Executive Vice President and Director of the newly merged New York Presbyterian Hospital in 1998. He previously served as Professor and Chair, University of Maryland Department of Pediatrics, University of Maryland at Baltimore. Prior to that, Dr. Berman served as director of pediatric cardiology at Maryland from 1976 until his appointment as chair of pediatrics in 1984. During his tenure at Maryland, Dr. Berman was elected president of University Physicians, Inc., the faculty practice plan for the University of Maryland physicians. In 1984, he also was instrumental in organizing and served as chairman of the physicians' and hospital's malpractice self-insurance program for more than 11 years.

Dr. Berman received his medical degree in 1967 from the State University of New York, Upstate Medical Center at Syracuse and subsequently his postgraduate training in pediatrics at Johns Hopkins. He then became the pediatric cardiologist for the National Heart Institute at the National Institute of Health. He served as chief of clinical pediatric cardiology and director of the cardiac catheterization laboratory at Yale University School of Medicine from 1970 to 1976. Dr. Berman developed a flow guided balloon catheter, the Berman Angiographic Catheter, which is used throughout the world and has published extensively on pediatric cardiology problems. He has received honors and awards for his research in pediatric cardiology from numerous organizations including the Children's Cancer Foundation, Inc., Heart to Heart International, and was recipient of the Helen B. Taussig Award by the American Heart Association, Maryland affiliate.

Dr. Berman has been repeatedly invited to moderate the Association of American Medical Colleges seminars for Minority Faculty Career Development and for the Development of Women in Medicine. He has also chaired and served on numerous committees and panels for the AAMC that have dealt with clinical productivity and faculty practice plan issues. He currently serves on the Executive Committee of the State Hospital Review and Planning Council.
